

Product Testimonials and Reviews

"The one thing I disliked about other sensor cleaning products was that each one I tried was not travel or field friendly. Some require canned air, others required a liquid solution. And others that required neither air nor liquid simply did not do the job. Not only can I take Dust-Aid on a plane in my carry-on luggage, I can take it on extended back-pack trips and always have the ability to clean my sensor no matter where I am. And the best part of the product is that it cleans the sensor so well! It is particularly good at pulling off those extra sticky particles of dust that other cleaners always seem to miss. I can now have a clean sensor no matter where my travels take me."

"Wow! This is one of those products that you slap yourself up-side the head and say, "Why didn't someone think of this sooner!" It's so easy, nearly foolproof, effective, and affordable - the hallmark of a great product. I've tried just about every other piece of sensor cleaning paraphernalia available and all either take too much time, are not totally effective, or risk leaving a mess. I especially like that it can be packed in carry-on luggage without a security problem. I'm going to recommend this product whole-heartedly to all my workshop attendees."

"I work for National Geographic Magazine in the Photographic Department. Today I used Dust-Aid on my own Canon 20D which has a lot of dust. It took me only a couple of minutes to do a cleaning. All the dust is gone and I am very happy with the result. I can recommend this product to all of our photographers in the field with confidence."

Kenji Yamaguchi

"Dust-Aid removes dust exactly as it advertises. I recommend this product to anyone with a steady hand and without an anti-dust mechanism already built into their camera. It was extremely easy to use, effectively removed dust and the entire system fits into its own cool container."

Ryan Klos, Calumet Photographic

"I tried Dust-Aid and was very pleased with how well it cleaned the camera sensor. I was a little nervous at first but it was easy and now my dust-free images look great."

Carmel France - Staff Photographer

"My work often takes me to remote locations where dust is all but unavoidable. In the past I tried a number of other products that proved useless in the field. Some required cans of compressed air, harmful chemicals, and always a clean working environment - all of which are impractical when hiking and backpacking. I resolved to cleaning my camera before leaving on a trip, knowing the sensor will soon be dirty again and that many of the images I come back with will require significant spot cleaning. That's when I found Dust-Aid, which changed everything. I found Dust-Aid not only faster and easier to use than competing products, but also a tool that better fits my type of work as it can quickly and safely be applied in the field. I now come home from trips with images that require little to no cleaning. There is no need for additional materials, tools or a sterile environment. It just works!"

"The Dust-Wand Kit was perfect for the crud stuck to the sensor in my DSLR. The wet cleaning made removal easy because somehow the dust on the sensor was physically stuck to the sensor, and would not blow off. Everything needed is included, and it is fairly straightforward. The cloth is carefully wound around the wand and wetted with the cleaning fluid. A few swipes of the wand and your sensor is clean. The fluid evaporates rapidly and leaves no residue or odors."

Phil
Columbus, Ohio

"After being frustrated for several months with my 20D, (the felt from around my sensor has been flaking off onto my sensor) I bought the Dust Wand Kit before a trip to Mammoth Lakes. I had absolutely no problems. No constant wiping is needed, just a few swipes and it was done. I have since looked at the pictures which are great with not even the smallest spot. Problem solved what a relief!!!!"

Christina
Rancho Cucamonga, CA

"I used the Dust-Wand Kit a couple of times and it does the job nicely. The included solution removed the oil that I managed to transfer on my sensor/filter when I swiped the swab over the edge of the sensor."

Tomi
APO AE, US

"I have used a number of different sensor cleaning products...including Visible Dust's products. While their products are good, I have loved the simplicity and ease of cleaning my sensor with the Dust wand kit. It is much more economical as well. Highly recommended. I have used this on a Nikon D2X and a D3."

Bob
San Francisco, CA

"Removes dust quickly and with great ease of use. No risk of smearing dust around the sensor. Just lightly press the special pad against the sensor and off comes the dust. A simple and clever sensor cleaning method that anyone can perform without fear of damage."

Mark
Brisbane, Australia

"Any time I increase my aperture to F10 or greater I would find small spots on my pictures, both in Macro and Wide angle shots. The dots were dust particles on the sensor filter. This product does an excellent job in keeping the filter clean. My Canon 20D does not have an automatic sensor cleaner."

Wild Life
Burlington, CT

"I use it to clean the sensor on my Cannon 20D. Worked well the time I used it. It is surprisingly small, simple and relatively easy to use."

Glu
Mesa, AZ

"By far the safest, fastest and easiest cleaning method for dust on the sensor of all cleaning methods I've used. I now reserve wet cleaning for only stuck particles but always begin with Dust-Aid Platinum. Per use, its also the most economical method. Its simple to use, and unlike swabs, this will never contribute lint to the chamber that swabs can leave behind. Just get it, you won't be sorry."

Joey
Manchester, CT

"It's so easy...even a dog can do it!!! Well...maybe not. But this is the simplest solution currently out there for an effective dry sensor clean. I wish I had this sooner. The instructions are simple to follow, and thanks to the "Platinum" version, it is safe on Canon sensors. Highly recommended!"

"Simply Superb"

Syed Suhail
Dubai, U.A.E

"All I can say is Wow!!! Just Wow!!! The first cleaning ended up with my sensor being cleaner than it ever has been before."

David A. Lewis
